We have always felt a sort of hankerWg for the balmy South ever since we irst studied geography. Our early impressions were so favorable that we used to sit on a bench in the old school house for hours at a time and bend our back as the "fertil ; salubrity of the clime and ducts" etc. Indeed our interest in these hings was so great that it was not unfrequent occurrence for us to remain on hour with the teacher, after school had closed for the day, to have him entertain us by asking questions pertaining to these things. And our kind ininstructor used to frequently remind us that throwing beans and paper-wads hout the school room was in reality
Yes, we used to long to be there. And
what boy, we ask, can sit down in a
country school house in January, with mercury fifteen below, and gaze upoa these sunny pictures of Flonda, without wishing his father would sell out and him) he could sit on the river bank all winter long an
placid strean?
Alas! what shall become of those ge ography makers? They left the alliga-
tors out of their pictures, when thes ought to have put then three deep along those sunny banks, and made the river black with them. $/$ Mr. J. O. Goodsell of this village shows us a letter just received from his son in Florida, which confirms the above. The letter states that in one
day he shot thirty alligators, and that the creatures are more dangerous than amia ble. They can be seen by the dozen any who has poetry enough in his nature to lead him beside those still watêns. A lit te scaly down there
The editor of the Journal has an egregious blunder. How to rectify it je local in at loss to determine. He ha the scisoors. All that now remains in the sanctum of immediate ase is the dictionary and a pair of number nine over
shoes, which, howerer, are not tight or large enough to contain our emotions.
