TELEPHONE LUNUS

HERE'S YOUR CALLING CARD, a 5 by 11 inch metal card with holes punched in it. Its job is to automatically pick the speediest route for your Long Distance call. And

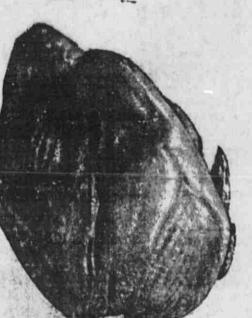

it does this with the speed of light. For instance, if you call Atlanta, as soon as the Michigan operator dials the Atlanta number the "Atlanta card" automatically pops into place and a light shining through holes in the card automatically connects your line with wires through Cincinnati to Atlanta. If those lines are busy, it connects with wires running through Chicago to Atlanta-or through New York to Atlanta. When an emergency requires an entirely new routing, someone at the switching center just punches a new card with a different set of holes and-bingo-your call takes the new routing. This saves issuing instructions to many different operators when a route has to be changed. Pretty good example of how Bell scientists try to give you the best and fastest service at low cost, don't you think?

Places a whole day's

drive away can be reached by phone for a dollar or less. The usual low "after 6 p.m. and all day Sunday" rates apply all day Easter. Make a list now of all those you want to phone a "Happy Easter."
