Food fads can be harmful. Why? Because each of the four basic food groups . . . (1) fruits and vegetables, (2) breads and cereals, (3) meat, (4) milk . . . provides you with certain nutrients the others lack. If you eliminate one food group from your diet, you may rob your body of some essential nutrients. A balanced diet, after all, is the first rule of how much. So, if you must watch your weight, cut down on the quantity, not the quality of your meals. And remember: you never outgrow your need for the 86 essential nutrients in milk—fresh milk.
